Anyone that lives in colder climates understands the complexities of winter and the snow build-up that follows. Thanks to a newly patented product from All Weather Armour, leaks from Snow Buildup can be a thing of the past by simply placing the ICEARMOUR® Heat Panel within the valley, eave, or gutter of any house.

Los Angeles, CA – Nov 24, 2017 – All Weather Armour made national headlines today with the announcement that they have received the Patent and have released the highly anticipated IceArmour® Heated Roof Panels. Engineered to provide maximum heat transfer, IceArmour® Heat Panels eliminate the dangers of accumulating ice and snow.

All Weather Armour is a leader in Research & Development in the home improvement industry and it is this wealth of experience that allowed them to develop a new product that will help so many consumers. One of the most vulnerable areas of roofs are the valleys. Due to the nature of the design, ice and snow will accumulate and cause leaking into the home. The IceArmour® Valley Panels are designed to eliminate this potential problem. The heavy extruded aluminum panels are glued in place using a rubberized adhesive and covered with durable aluminum Kynar 500 covers. IceArmour® Valley Panels are not only energy efficient and durable, but are elegant in design.

During a recent press event, the company spokesperson for All Weather Armour was quoted as saying, “Protect your business, your home and family – they are worth it. IceArmour® Heat Panels provide guaranteed safety by eliminating the danger of melting ice on entrance ways, walkways and high traffic areas. We built this product with consumer safety in mind and we are happy to see so many families using the IceArmour® Heated Roof Panels.” He went on to say, “This is something that is durable and designed to last for decades. We tried to make it as user friendly as possible so that it is not out of the reach of anyone needing to get rid of that damaging snow buildup.”

There are other products on the market that claim to work, only for the consumer to be let down and out of money. This new Patent issued by the U.S. Government proves the quality of the IceArmour® Heated Roof Panels. IceArmour® Heat Panels utilizes the most durable materials. Aluminum extrusions provide the best heat transfer and strength to survive the coldest environments. The Kynar 500/Hylar 5000 paint finish insure against chipping or fading.
